The ICE and ASCE Met Section Forensic Engineering Technical Group invite you to a talk on:

“Structural Risk Assessment & Management - System Performance Identification as a Method of Forensic Science (and how to avoid errors)”

By: Thomas Winant/Alan Jeary

ABSTRACT:

This presentation gives an indication complete with examples, of the ways that structures signal their overall state of health. The interpretation of the way that signals from the structure can be decoded are also considered, together with examples from structures in the field. The presentation also includes details of common difficulties with seismic measurement and how to avoid them.
